

Projects

East Ham Leisure Centre, United Kingdom

Leisure complex comprising: swimming pool, fitness suite, dance studios and sauna.

Indoor swimming pools present a challenge with a need to offer good illumination levels without the direct glare from the light source. Particular attention must be paid to the quality of materials and finish used on products to prevent corrosion from the humidity and the chlorine content in the atmosphere.

Azmet 3, with its high performance, wide double asymmetric light distribution and 400 watt MBI-T lamp, provided the ideal solution. The desired lighting level was achieved using the Azmet 3 as an uplighter. The GRP moulded body gives corrosion protection with IP 65 for integrity. Other areas within the complex used Thorlux IP 65 downlights, 38 watt 2D Dots and Recessed Radiance.
