

Projects

Palm Paper - Processing, Bavaria, Germany

This extensive plant in the North of Bavaria, Germany, incorporates highly sophisticated machinery for the large-scale, high speed production of packing materials. The lighting specification called for a high protection rating of IP65, low maintenance and high level lighting.

The contractor, Bechert GmbH & Co. KG, Bayreuth, Bavaria, made the decision following approval from the engineering consultant, to install the Thorlux "Thorseal" High-Bay industrial luminaires. The die-cast aluminium control gear housing and "hard-glass" safety cover were just some of the convincing features. 110 of these fittings with 250 Watt metal halide lamps are now making their contribution to a trouble-free production process at this facility.

THOROSEAL

Thorlux AZMET 70 (left) and AZMET 3 (right) used to illuminate the exterior of the building
