

Projects

Bavaria Petrol, Petrol Station, Munich

The Bavaria Petrol chain of petrol stations, like so many others in Germany, is lit by Thorlux Canolux petrol station luminaires.

These lighting fittings have been specially developed for use in petrol stations. Over a period of many years and in thousands of installations, they have proven to be extremely reliable, maintenance free and cost efficient.

Bavaria Petrol has used the specialist - PK Lighting Services - in Munich to refurbish some of the older 250 Watt Canolux installations with the new ceramic 150 metal halide lamps. Under certain circumstances it is possible, by taking advantage of the higher lumen efficacy of these lamps, to achieve considerable energy savings.

..... *building on our experience*
