Doncasters Deritend-Precision Castings, Droitwich, United Kingdom

Eighteen 4-lamp 54W Solow T5 luminaires were installed at a mounting height of four metres to provide 750 lux at floor level within a specialist casting inspection area.

Six Thoroproof T5 35W luminaires were also used to upright the roof area, to help reduce glare by relieving contrast.

The result was reduced power consumption over the existing installation, giving twice the burning hours of discharge lamps. Fast installation, (as the Solow gear tray is also the mounting plate) cut labour costs. High output T5 lamps with 4000K colour temperature gave the crisp white light required for this type of environment

Six of the SolowT5 luminaires were self contained emergency versions.
