

Projects

Neumann & Müller GmbH, Munich

As a specialist for providing the technical equipment for Events and large presentations, Neumann & Müller is no stranger to the subject of lighting. When it was decided to replace the existing batten lighting fittings, they had therefore a clear idea as to what they wanted.

Because the warehouse is used not only for stocking material, but also for commissioning and assembly, the lighting scheme had to take specific needs into consideration.

The decision was made to install Thorlux – SOLOW compact low depth luminaires. The selected 400 Watt metal halide version ensures a tailor made lighting solution. Excellent colour rendition and high energy efficiency, guaranteed complete customer satisfaction.
